David Brothers Landscape Services & Native Plant Nursery

Located at the corner of
Bean and Whitehall Roads
Norristown, PA 19403
610-584-1550

www.davidbrothers.com

Hours of Operation:

The nursery is open during normal business
hours Monday - Friday.

Please call in advance to schedule an
appointment if you would like to meet with a
sales representative.

*Welcome to
David Brothers Landscape Services
& Native Plant Nursery*

Our Green Philosophy

Our Landscape Services and Native Plant Nursery are founded on a philosophy that recognizes the importance and unique character of our native landscape. Through sensitive design, quality construction and the use of native plants we create environmentally sound and enjoyable spaces that contribute to the preservation of our native plant communities and our local and regional landscapes.

Full Service

David Brothers is a complete landscape and construction service aimed at building and maintaining your landscapes and outdoor living spaces. We provide plants through our native plant nursery. We are also happy to organize and deliver all the plants required for your project.

Native Plants

We offer a broad range of native species. Some species we offer through our family of nurseries may need to be pre ordered. In addition to our native plants, we carry a limited selection of introduced species to help create habitat where appropriate native species are over stressed.

Sales Support

One of our knowledgeable sales representatives will be happy to meet with you and review your project and opportunities to enhance your landscape. To set up an appointment with one of our staff, either at the nursery or your residence, please call **610-584-1550**.

To view some of our completed projects or learn about the scope of our unique services please visit us on the web at

www.davidbrothers.com

TREES:

Acer rubrum *Red Maple*

Also cultivars and varieties

1 1/2-2"	\$195
2 - 2 1/2"	\$265

Eupatorium maculatum *Joe Pye Weed*

Salvia sylvestris *Meadow Sage*

Sedum x 'Autumn Joy'* *Sedum*

#1

\$10-12

Notes

David Brothers

Green Infrastructure Services

Leading the Way in Constructing Green Technology

Green Roofs

Green roofs are veneers of living systems used on top of buildings. Composed of light weight media and vegetation, Green Roofs provide many environmental benefits including managing storm water at the source.

Rain Gardens

Rain gardens are subtle depressions in the landscape that collect water. While supporting a wonderful variety of native plants, Rain Gardens also slow down the movement of water and promote infiltration.

Bio Swales

Bio Swales, much like Rain Gardens, are natural systems used to convey the flow of water through the landscape. Bio Swales are naturally vegetated to stabilize the soil and prevent erosion while proving valuable habitat. Bio Swales can be integrated with Rain Gardens in the creation of a chain of Best Management Practices.

Living Retaining Walls

Living Retaining Walls are vegetated walls used when a change in grade is required. Living Retaining Walls include planting pockets that allow for appropriate vegetation to grow integral with the wall providing beauty as well as many environmental benefits.

Green Walls

Green Walls are vertical surfaces composed of vegetation used in conjunction with building facades. Green Walls include integral irrigation systems that support the growth of plants. Green Walls provide environmental benefits including cleansing of the water and filtration of the air.

Porous Paving

Porous Paving systems are designed and constructed to promote the infiltration of water. Porous paving is suitable for parking areas, terraces and walkways and reduces runoff that causes erosion of natural systems.

To view some of our completed projects or learn about the scope of our unique services please visit us on the web at

www.davidbrothers.com

Definitions

Native Species

David Brothers Native Plant Nursery considers as native species those plants that existed in the South Eastern Pennsylvania region before European settlement. Native species are adapted to the region and integral to the wildlife of the area. Due to climate change we consider southern species and others that border our region and will naturally migrate to be acceptable native species to this region.

Learn more about native plants at U.S. EPA Green Landscaping with Native Plants www.epa.gov/greenacres/

Non-Native Species

Non native species are plants introduced to the region. Non-native plants are marked with an *.

Invasive Species

Invasive species are plants that have aggressive reproductive characteristics and often displace preferable native species resulting in a loss of bio-diversity. The spread of invasive species is responsible for the loss and decline of many of our native landscapes. Invasive species should not be utilized in gardens or the landscape in order to prevent them from spreading into surrounding areas. Invasive species should be removed from the landscape when feasible and otherwise managed to prevent seed dispersal and reproduction.

Learn more about invasive plants at National Park Service Weeds Gone Wild
www.nps.gov/plants/alien/pubs/

Cultivars

Cultivars are plants, selected for particular attributes, that are clearly distinct, uniform, and stable and that retain these characteristics when propagated by appropriate means. There are many cultivars of native species selected for their unique attributes.

Hybrids

Hybrids are a cross between different clones within a species or between clones from different species that together represent unique characteristics. Many native species will naturally hybridize while other hybrids are induced by horticultural processes.

Monoecious

Monoecious plants are those that have both the male and female organs on the same individual plant. Monoecious plants only require one individual plant for pollination and fruiting to take place.

Dioecious

Dioecious plants are those that have the male and female organs on separate individual plants. Both a male plant and a female plant are required for pollination and fruiting to take place. The Ilex (Holly) species is a prime example of dioecious plants.

David Brothers Native Plant Nursery is committed to informing our patrons about the use of native species in the landscape. Thank you for selecting David Brothers Native Plant Nursery.
